Introduction

Enterprises need a robust data protection strategy to manage the massive volumes of data being continuously generated by their operations. Further, they need a simple and cost-effective way to manage legacy backups that are stuck in silos because of the cost and complexity associated with existing storage technologies and time-consuming data migration challenges. These organizations desire scalable storage, faster retrievals, and a secure cloud offering without the complicated and unpredictable pricing.

Lyve Cloud delivers a cost-optimized cloud backup storage repository that supports frictionless transfer of backup data for storage and long-term retention.

Ease of Backup Storage Management

Lyve Cloud is S3-compatible, and businesses can easily manage backups with their choice of backup management solutions. Customers can expect fast and reliable retrievals with always-on availability of backup data. Transparent pricing and zero egress fees simplify decisions on backup policy or retention length to ensure business continuity in case of a major data loss or single-file restore.

Cloud Data Protection

Seagate® is the industry leader in data-at-rest protection, and Lyve Cloud meets all mandatory security and compliance requirements through ISO 27001, SOC 2, and HIPAA certifications. Authentication and secure upload/download processes protect user data with encryption that is always on and available for data in flight and at rest. Lyve Cloud is designed for high availability, durability, and resiliency that is more advanced when compared to other public cloud storage services. Data is protected from data loss and silent data corruption. Not even a ransomware attack or other cybersecurity threat can damage data when compliant mode for object immutability is enabled.

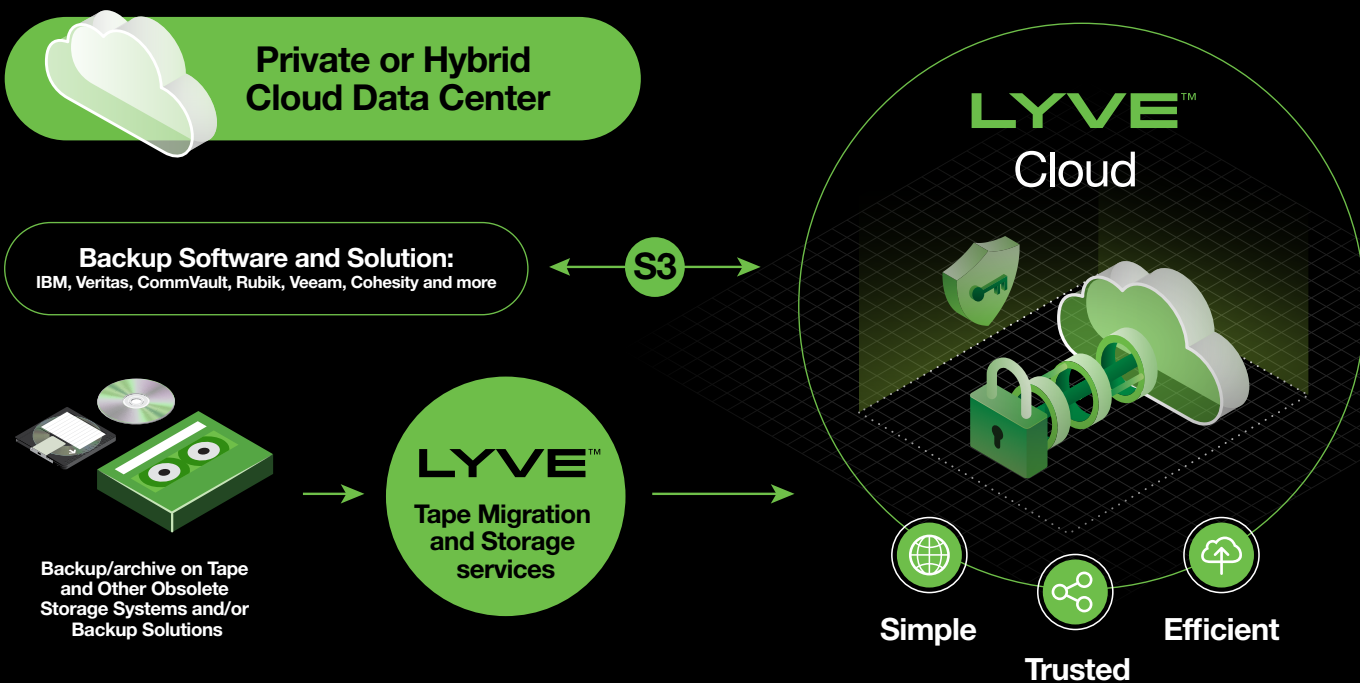

Predictable Cloud Economics

Lyve Cloud's simple pricing for always-on data ensures that storage costs are transparent. There are no surprise charges or lock-ins from punishing egress fees. Paying only for storage that is used, customers can reduce the total cost associated with data protection and backup—allowing them to scale on-demand without financial risk. Located at the metro edge, Lyve Cloud can be used to replace or complement nearline backup or colocation data center backups and to reduce or transition tape backups and archives to the cloud—thus eliminating costs associated with physical tape media storage and frequent technology upgrades.
