Welcome to Your Personal Cloud 2-Bay

Thank you for purchasing the Seagate Personal Cloud 2-Bay. You and everyone in your household can create a centralized media library and safeguard your important files in one location.

With Seagate’s free apps, your content is safe and available to you no matter where you are.

Seagate Dashboard—Create backup plans to effortlessly and automatically back up content from your PC.
Seagate Dashboard—Create and maintain your media library on your PC or Mac with the Smart Copy feature.

Seagate Mobile Backup—Back up your mobile devices to your Personal Cloud 2-Bay.
Seagate Media—Stream your media library to your mobile devices, Smart TVs, and other media devices.

Backup Manager—Back up to the cloud and sync with cloud services.
Backup Manager—Back up your backups to USB attached storage or another network attached storage device.

System Requirements

Before you begin setting up your Personal Cloud 2-Bay, read through these instructions and specifications and review the safety guidelines.

What’s in the Box?

Make sure that you have these items. If not, contact Seagate Customer Support.
Hardware Requirements

Your router must have one 10/100/1000 Ethernet port.

Software Requirements

- Windows® 10, 8.1, Windows 7, and Windows Vista®
- Mac OS® X v10.7 or later

Internet Requirements

- Internet connection for activation and online file access and sharing

One of these web browsers:
- Internet Explorer® 9.x or later
- Firefox® 5.x or later
- Chrome 11.x or later
- Safari® 5 or later

Connect Your Personal Cloud 2-Bay

1. Using the supplied Ethernet cable, connect your Personal Cloud 2-Bay to your Wi-Fi router.
2. Attach the power adapter to the Personal Cloud 2-Bay power port, and plug the adapter into a power outlet.

While powering up, the LED on the top of the device quickly flashes white. When the LED is a solid white, the device is ready to access on your network. For more information about the LED behavior, see LED Behavior.
Owner Setup

When you set up your Personal Cloud 2-Bay, you also create the owner account. The owner adds users, manages the device’s services, such as iTunes, and manages device settings, such as power management.

If you followed the quick start guide and were successful setting up your device and adding your owner account, you can start adding users.

Set Up Your Owner Account

1. Access your Personal Cloud 2-Bay.
   - PC—in Windows or File Explorer under Networks, click PersonalCloud.
   - Mac—in Finder under Shared, click PersonalCloud.

   ![Note: If your computer does not detect your Personal Cloud 2-Bay, go to Seagate Support.]

2. Open the Public folder and then double-click Personal Cloud.

   The Welcome screen opens in your web browser.

   ![Note: You can also access your Personal Cloud 2-Bay through the Seagate Dashboard desktop icon. Learn more about the Seagate Dashboard.]

3. Accept or change your storage settings.

   By default, your Personal Cloud 2-Bay is configured for maximum protection. This means that all of the data you copy to your device is stored on one disk, and a copy of that data is stored on the second disk. This configuration provides the greatest protection, but does reduce the total capacity of storage on your drive. In the event of a disk failure, you can replace the failed disk and continue to use your Personal Cloud 2-Bay.

   To use all of storage available on your device, select Maximum capacity. This option allows you to use all available storage, but offers no data protection.

   ![Note: If you change the configuration of your Personal Cloud 2-Bay after you have created your media library or backed up computers in your home, you will lose your data. Copy all data to another device before you reconfigure your device to a different storage setting.]

4. Enter your email address and create a password.
If you have registered with Seagate before (for example, you already have a Seagate Access account), you can use the same email address and password.

Your Personal Cloud 2-Bay creates your:
- Username, which allows you to access your private folder, manage users, and manage device settings
- Private folder where you can store personal content
- Seagate Access account, which allows you to access your Personal Cloud 2-Bay remotely and enable remote access for other users

A message is sent to your email account with the confirmation code needed to activate your Seagate Access account.

5. Enter the confirmation code and complete your owner information.

Note: Check your spam folder if you don’t find an email in your Inbox.

6. Click Finish.

The Personal Cloud 2-Bay Welcome tour opens. Take a moment to complete the tour to learn about Personal Cloud 2-Bay features.

The Personal Cloud 2-Bay management page opens.

1. **Device Manager.** Manage users and manage your device.
2. **Download Manager.** Download files from the Internet and upload files from your device.
3. **Backup Manager.** Manage your backups from your computer, cloud service, and device.
4. **App Manager.** Add new features to your device.
5. **Sdrive.** Access your content remotely.
6. **Seagate Media.** Enjoy your media library on your mobile devices.

You are now ready to:
- **Add user accounts**
- **Begin building your media library**
- **Protect your important documents**
- **Manage your Personal Cloud 2-Bay**
Adding and Managing Users

The Personal Cloud 2-Bay owner can add and manage users.

Open the Users page

1. Access your Personal Cloud 2-Bay.
   - PC—In Windows or File Explorer under Networks, click PersonalCloud.
   - Mac—In Finder under Shared, click PersonalCloud.
2. Open the Public folder and then double-click Personal Cloud.
3. Sign in with your username and password.
4. Click Device Manager and then click Users.

Add users

As the owner, you can invite people at home and outside of your home network to use your Personal Cloud 2-Bay.

1. Open the Users page.
2. Click Add user.

You can add two types of users:
   - Local and remote—A user who has access to your home network and can also have remote access to your Personal Cloud when away from home.
   - Local only—A user who has access to your home network only. You can add remote access later.
3. Complete the New User form.

An email with instructions is sent to the new user. Users should check their Spam folder if they have not received their email invitation. The code is valid for 72 hours. The owner can send a new invitation if the code expires.

Manage remote access for an existing user

The owner can manage remote access on a user-by-user basis. Remote access allows users to access content while away from home.
You can also control remote access for all users.
To manage remote access for a specific, existing user:

1. **Open the Users page.**

   ![Note: If you want to enable remote access and you haven't confirmed your Seagate Access account, do so now by clicking Confirm Email.]

2. Click the dot under Seagate Access to the right of the username.

<table>
<thead>
<tr>
<th>Seagate Access Status</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Seagate Access is on</td>
</tr>
<tr>
<td>![yellow dot]</td>
<td>The owner has invited a user to create a Seagate Access, but the process is not complete.*</td>
</tr>
<tr>
<td>![gray dot]</td>
<td>Seagate Access is off</td>
</tr>
</tbody>
</table>

* A yellow dot indicates a pending status. You have invited the user to create a Seagate Access account and the Personal Cloud 2-Bay is waiting for the user to complete the process.

## Edit a user

Only the Personal Cloud 2-Bay owner can change a user's username and email address. Both the owner and user can change the user's private folder password, as described in Passwords.

1. **Open the Users page.**
2. Click the item you want to change.
   - **Username**—Changing the username also changes the user's private folder name.
   - **Password**—Changes only the user's private folder password. The Seagate Access password used to remotely access your Personal Cloud 2-Bay does not change.
   - **Email address**—The email address is the user's Seagate Access ID, which is used to remotely access your Personal Cloud 2-Bay.

## Delete a user

The Personal Cloud 2-Bay owner can delete all user accounts. Deleting a user account also deletes the user's private folder and its contents.

If the user has created backup plans through the Backup Manager, the backups are also deleted. For more information, see Backups.

1. **Open the Users page.**
2. Place the cursor to the right of the Seagate Access column in the user's row, and click the X.
Public and Private Folders

Your Personal Cloud 2-Bay has a Public folder that anyone can use and a private folder where each local user can store personal content that others cannot see.

What’s the difference?

Everyone on your home network can access the Public folder. Anyone who has been given a Seagate Access account to the storage device can also access the Public folder. Use the Public folder for files you want to share and for your centralized media library.

A private folder is created for each user account and is password protected. Use your private folder to back up content that you don't want to share with others.
Which folder to use

Public folder

Create your media library in the Public folder and copy any data that you want to share to the Public folder so that you and others can access it. See Media Library.

Private folder

Back up your content to safeguard against computer malfunctions. Content backed up to the Public folder can be viewed by anyone who has access. No one but you can view content backed up to your private folder. You can back up your computer and mobile devices using Seagate Dashboard software and Seagate Mobile Backup apps. You can also back up your backups by creating backup and sync plans in the Personal Cloud 2-Bay with Backup Manager.

For information on Seagate Dashboard and Mobile Backup apps, visit the Seagate Dashboard page.

For information on backing up your backups, see Backing Up and Syncing Content.
Media Library

You can use your Seagate Personal Cloud 2-Bay to centralize your media. Everyone with a user account can copy their media to the library and stream content in the library on devices throughout your home and away from home.

Create and maintain your media library

Music, movies, and photos—you and other household members probably each have media files on multiple devices. You can consolidate your media in one place on your Personal Cloud 2-Bay for sharing and easy maintenance.

Copy your media library to the Public folder on your Personal Cloud 2-Bay. You can easily stream the content on your other devices using the Seagate Media app, which only accesses the Public folder.

Before you copy your media to your Personal Cloud 2-Bay from your computer, Seagate recommends that you connect your computer directly to your router instead of using a Wi-Fi connection. Wi-Fi speeds are not ideal for copying large quantities of files.

<table>

| **Apple TV**                  | 1. Install the Seagate Media app on your mobile device.  
2. Connect your mobile device to your Personal Cloud 2-Bay.  
   (Your mobile device and Personal Cloud 2-Bay must be on the same home network.)  
3. Launch the Seagate Media app.  
4. Use the Apple TV remote to select the local network from the list or to enter local network's name if the network is hidden.  
   (Your Apple TV must be on the same home network as your Personal Cloud and mobile device.)  
5. Enter your password if requested. The Apple TV connects to the router.  
6. Enable AirPlay.  
   Swipe up from the bottom of your mobile device to access **Control Center**. Select your Apple TV.  
   **Tip:** Make sure Mirroring is off for Videos and Music.  
7. Select a movie or song in the Seagate Media app and click **Play**.  
   The AirPlay icon appears on the far right, beside the "Forward" button.  
   The movie or song plays on the TV connected to your AirPlay device. |
| **Chromecast**                | 1. Configure Chromecast on your TV and Wi-Fi per the manufacturer's instructions.  
2. Install Seagate Media on your mobile device.  
3. Tap the cast icon and choose video, photo, or music to start casting. |
| **DLNA Certified device**     | The DLNA service, an industry-wide standard for sharing data over a home network, is turned on by default on your Personal Cloud 2-Bay.  
1. Connect your DLNA Certified device and your Personal Cloud 2-Bay to the same Wi-Fi network (when required).  
2. Consult your DLNA Certified device's instructions.  
3. Generally, DLNA provides a menu showing available devices. Select your Personal Cloud 2-Bay.  
   Your DLNA Certified device loads the content it is able to play from your Personal Cloud 2-Bay. |
### iTunes

1. Turn on the iTunes service.
2. In the Device Manager, click Services.
3. Place your mouse over the iTunes service. Click the **Edit** menu that appears, and then click **Start**.
4. Start iTunes on your computer.
5. Open Preferences. (On a Mac keyboard, press command+comma. In iTunes on your PC, select **Preferences** from the **Edit** menu).
6. Click the **General** tab and ensure that **Shared Libraries** is checked.
7. Open the menu sidebar (**View > Show Sidebar**)
   - Under Shared, select **PersonalCloud**
   - To learn how to copy your iTunes library to your Personal Cloud 2-Bay, visit the [Seagate Personal Cloud 2-Bay support page](#).

### LG TV

1. Turn on your LG TV.
2. Connect your LG TV and your Personal Cloud 2-Bay to the same Wi-Fi network.
3. Install the Seagate Media app on your mobile device.
4. Connect your mobile device to your Personal Cloud 2-Bay.
5. Tap the cast icon and choose video, photo, or music to start casting.

### Roku

There are two ways to enjoy content on Roku.
1. Install Roku Media Channel from the Roku app store and connect to your Personal Cloud 2-Bay through the app.
2. Install the Seagate Media app on your mobile device. Connect your Roku device and Personal Cloud 2-Bay to the same Wi-Fi network.
   - Tap the cast icon and choose video, photo, or music to start casting.

### Samsung Smart TV

Install Seagate Media from the Samsung app store and connect to your Personal Cloud 2-Bay through the app.

---

### Stream media away from home

<table>
<thead>
<tr>
<th>To remotely access content to your</th>
<th>You need to</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Install the Seagate media app.

Seagate recommends that you install the Seagate Media app on your mobile device for optimal access and viewing of your media. The Seagate Media app contains a remote access module that allows you to sign in to your Seagate Access account and access your Personal Cloud 2-Bay media library.

**Note:** You must create your Seagate Access account on your Personal Cloud 2-Bay before you can sign in through the Seagate Media app.

### Remotely access media content

You can remotely access your centralized media library on your Personal Cloud 2-Bay from your Mac and PC computer.

<table>
<thead>
<tr>
<th>To remotely access content on your Mac and PC computer</th>
<th>You need to</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>1. Install Sdrive, an application that you use to access content on your Personal Cloud 2-Bay.</td>
</tr>
<tr>
<td></td>
<td>2. Go to the <a href="#">Personal Cloud 2-Bay support page</a> and install the Sdrive client on your computer.</td>
</tr>
<tr>
<td></td>
<td>3. Restart your computer. The software automatically opens.</td>
</tr>
<tr>
<td></td>
<td>4. Sign in with your Seagate Access account credentials.</td>
</tr>
<tr>
<td></td>
<td>5. Review the drives associated with your Seagate Access account:</td>
</tr>
<tr>
<td></td>
<td>• Windows: Right-click the Sdrive icon in the system tray.</td>
</tr>
<tr>
<td></td>
<td>• Mac: Left-click the Sdrive icon in the menu bar.</td>
</tr>
</tbody>
</table>
Back up

Seagate provides several ways to protect your content. You can back up your computer, your mobile devices, your DSLR camera, and your Personal Cloud 2-Bay.

Before you back up your computer to your Personal Cloud 2-Bay, Seagate recommends that you connect your computer directly to your router instead of using a Wi-Fi connection. Wi-Fi speeds are not ideal for copying large quantities of files. After you have created your first backup, you can back up future changes over Wi-Fi.

### Back up your computer and mobile devices

<table>
<thead>
<tr>
<th>To back up content from your</th>
<th>You need to</th>
</tr>
</thead>
<tbody>
<tr>
<td>PC</td>
<td>Install Seagate Dashboard on your computer, and create a backup plan.</td>
</tr>
</tbody>
</table>
| Mac                         | Set up a Time Machine plan.  
   1. Open Time Machine preferences.  
   2. Click Select Disk.  
   3. Find your Private folder name.  
   4. Select the folder and click Use Disk.  
   5. Enter your Personal Cloud username and password.  
   6. Click Connect.  
     Wait for a minute or two to connect. Your backup will start automatically. |
1. Install Seagate Dashboard on your PC or Mac, and sign in to the Mobile Backup section in Dashboard.
2. Install the Seagate Mobile Backup app on your mobile device from your app store and create a backup plan as instructed in the app’s help. Install Seagate Media on your mobile device from your app store, and set up Auto Upload. Auto Upload is located in the Settings menu of the Seagate Media app. It backs up photos and videos only over Wi-Fi.

---

| Personal Cloud 2-Bay | Use the Personal Cloud 2-Bay Backup Manager. |

---

**Back up your Personal Cloud 2-Bay**

You can protect the content on your Personal Cloud 2-Bay by backing it up to another storage option.

- Back up to an external drive
- Back up to another Personal Cloud 2-Bay
- Back up to your cloud service

**Open the Backup Manager**

1. Access your Personal Cloud 2-Bay.
   - PC—In Windows or File Explorer under Networks, click PersonalCloud.
   - Mac—In Finder under Shared, click PersonalCloud.
2. Open the Public folder and then double-click Personal Cloud.
3. Sign in with your username and password.
4. Click Backup Manager.

**Back up to an external drive**

If you are backing up to an externally attached drive, attach the drive to a USB port on your Personal Cloud 2-Bay. There are two USB ports available: USB 2.0 and USB 3.0. The USB 3.0 port is on the right-hand side of your Personal Cloud 2-Bay; the USB 2.0 port is on the back.

1. Open the Backup Manager.
2. Click Personal Cloud 2-Bay, and then click Add backup.
3. Select Local Backup, and then click Next.
4. Select the folder of the content you want to back up.
5. Select the destination folder, or in the External ports section, select the externally attached drive.
6. (Optional) Create a new folder to organize your backups.
7. Choose a backup mode: manual, scheduled, or automatic.

---

**Back up to another Personal Cloud 2-Bay**
You can back up your Personal Cloud 2-Bay to another Personal Cloud or a Personal Cloud 2-Bay.
1. Open the Backup Manager.
2. Click NetBackup server
3. Click Personal Cloud, and then click Add backup.
4. Select Network Backup, and then click Next.
5. Select the folder of the data that you want to back up.
6. Select NAS OS device as your destination, and then click Next.
7. Select a device from the list and complete your backup job.

**Back up to your cloud service**

To back up content to a cloud service, you must have an account on the service and an existing destination folder that you can use for your backup.
1. Open the Backup Manager.
2. Click Personal Cloud, and then click Add backup.
3. Select Network Backup, and then click Next.
4. Select your cloud service as your destination, and then click Next.
5. Sign in to the cloud service and type the name of the destination folder.
6. In Advanced parameters, securely transferring data is the default. You can change this selection. (This feature is dependent on your cloud service offering.)
7. (Optional) Select to never delete files on the destination folder when they are deleted from the source.
8. Select a backup mode: manual or scheduled.
9. Create a name for your backup job.
Sync with Your Cloud Service

You can protect the content on your Personal Cloud 2-Bay by synchronizing it with your cloud service. Syncing also lets you access your content from anywhere. This two-way sync guarantees that the Personal Cloud 2-Bay content that you choose to save to the cloud service stays up to date when you make changes in the cloud service or on your Personal Cloud 2-Bay.

Personal Cloud 2-Bay sync supports Google Drive and Dropbox. You must have an account on the cloud service and an existing destination folder to use for your sync.

1. Open the Backup Manager.
2. Click Sync, and then click Add sync.
   - Select a cloud service.
   - Accept the conditions presented from the cloud service. Your account information displays next to Account.
   - Click Next.
   - Select the folder you want to sync, and then click Next.
3. Set a schedule.
4. Click Finish.
You can use your Personal Cloud 2-Bay as an efficient way to download large PDF, torrent, or binary files from your computer or the Internet.

Open the Download Manager

1. Access your Personal Cloud 2-Bay.
   - PC—In Windows or File Explorer under Networks, click PersonalCloud.
   - Mac—In Finder under Shared, click PersonalCloud.
2. Open the Public folder and then double-click Personal Cloud.
3. Sign in with your username and password.
4. Click Download Manager.

Download large files

You can download torrent files from your computer to your Personal Cloud 2-Bay and download PDF, binary, and torrent files from the Internet.

1. Open the Download Manager.
2. Click Jobs.
3. If the service is off, click the slider on the right to turn the service on.
4. Click Add download.
5. Enter the source.
   - If the file is on the Internet, select URL and enter the URL address.
   - If the file is on your computer and it is a torrent file, select Local and browse for the file.
6. Enter the destination folder on your Personal Cloud 2-Bay
7. Click Save.

Manage download settings

You can change the number of downloads that you can request at the same time and change the download and upload rates.

Open the Download Manager and click Settings.
Passwords

Passwords are often required to access a Seagate device, application, or web page.

How are Personal Cloud passwords used?

Passwords are used to:
- Access your private folder on your Personal Cloud 2-Bay
- Remotely access your Personal Cloud 2-Bay with a Seagate Access account or by installing the Sdrive client or app on your computer or mobile device.
- Back up your mobile content to your Personal Cloud 2-Bay.

Change your password

When you change your password, Seagate helps you keep other passwords in sync. Most users will have a Personal Cloud 2-Bay password (to access their private folder) and a Seagate Access password (for remote access). If you try to change your Personal Cloud 2-Bay or Seagate Access password and Seagate cannot synchronize the passwords (for example, you might not be connected to the Internet), you will not be allowed to change your password.
Your Personal Cloud 2-Bay has been configured with standard default settings. The Personal Cloud 2-Bay owner can modify the settings, such as the device name, time zone, and the services used.

Open the Device Manager

1. Access your Personal Cloud 2-Bay.
   - PC—In Windows or File Explorer under Networks, click PersonalCloud.
   - Mac—in Finder under Shared, click PersonalCloud.
2. Double-click the Public folder on the right side, and then double-click Personal Cloud.
3. Sign in with your username and password.
4. Click Device Manager.

LED Behavior

Your Personal Cloud 2-Bay LED is on the top of your device. When your device is starting up for the first time, the LED blinks white. After 8 – 10 minutes, your device is ready to access over your Wi-Fi network.

Note: Your LED might continue to blink, as the hard disk drive is initiating the software.

If you reset your device, the LED begins blinking red, and then blinks white.

Personalize your Personal Cloud 2-Bay

You can personalize your device by changing its name, the language, time zone, and more.

Note: Changing the device name does not affect local or remote access.

1. Open the Device Manager.
2. Click Settings and make your changes.

You can change settings that have an on and off button or display a pencil icon when you place the cursor over the setting. Click the pencil icon to make a change.
Reset your Personal Cloud 2-Bay

You can reset your device. A reset is not data-destructive. Performing these steps resets the network settings and requires you to go through the initial setup process again. Your data is moved to a folder called Recovery in the Public folder.

The reset button is inside the casing on the back of your Personal Cloud 2-Bay.
1. Power off your Personal Cloud 2-Bay using the power button on the back of the device.
2. Insert a paper clip or slim object into the hole on the back of your Personal Cloud 2-Bay and press down the reset button. Do not release the reset button.
3. Power on your Personal Cloud 2-Bay.
4. Wait for a minimum of 20 seconds, and then release the reset button.
5. The LED will blink red. Wait while the device resets to factory settings.
6. Wait for the LED on the top of the device to show a steady, non-blinking white light.
7. Set up your device.

Changing Device Services

Your Personal Cloud 2-Bay is preconfigured with many services that allow you to stream to a TV, use iTunes, download and upload files to your computer, and manage remote access.

Start and stop a service

1. Open the Device Manager.
2. Click Show advanced settings, and then click Services.
3. Move the cursor over the service until the Edit button appears on the right.
4. Click Edit and select Start or Stop.

Re-index a media service

If media files appear to be missing from your media service, you can re-index the service to take an inventory of available multimedia files.
1. Open the Device Manager.
2. Click Show advanced settings, and then click Services.
3. Move the cursor over a media service until the Edit button appears on the right.
4. Click Edit and select Re-index.

Control remote access for all users

By default, anyone with a Seagate Access account on your Personal Cloud 2-Bay can access content on the storage drive while away from home. You can disable this ability for all accounts. If you want to disable this ability for a specific user, see Manage remote access for an existing user.
1. Open the Device Manager.
2. Click Show advanced settings, and then click Services.
3. Move the cursor over Seagate Access until the Edit button appears on the right.
4. Click Edit and select Enable remote access or Disable remote access.
   A green circle indicates that the service is enabled.

Conserve power usage

You can save energy by turning off hard drives and powering off your device after a specified interval of inactivity. When you turn off the hard drive, it still remains active to receive network commands from other devices.
1. Open the Device Manager.
2. Click Show advanced settings, and then click Power.
3. To turn the hard drive off after a specified interval, select a value from the pull-down menu.
4. To turn power saving mode on or off, slide the button.

Connect your device to an uninterruptible power source

Connecting your Personal Cloud 2-Bay to an uninterruptible power source (UPS) ensures a continuous power supply.
1. Confirm that no one is accessing your Personal Cloud 2-Bay and power it off.
2. Connect a supported UPS device to a USB port on your Personal Cloud 2-Bay.

   Note: If you plan to schedule frequent backups to and from an external device, you might want to connect the UPS to the USB 2.0 port on your device. The USB 3.0 port provides greater transfer speeds.

3. Power on your Personal Cloud 2-Bay.
4. Open the Device Manager.
5. Click Show advanced settings, and then click Power.
6. Set the battery threshold level.

If your Personal Cloud 2-Bay reaches the threshold, it will automatically enter stand-by mode. The UPS’s status is provided within UPS Management:
Monitoring

Monitoring provides a summary of your Personal Cloud 2-Bay:

- **System.** Review the overall health, the CPU and RAM consumption, and processes.

  If you see an issue with the temperature, check the placement of your NAS to make certain that it is not receiving an abnormal amount of heat from external sources (e.g. sun from a window, heating duct, exhaust from other electronics, etc.). If you receive a drive error, select the **Drive** tab to review the status of the hard drives.

- **Drive.** Review basic information for each hard drive, including the model number, capacity, temperature, and SMART status. SMART stands for Self-Monitoring, Analysis and Reporting Technology. SMART status should be used for informational purposes only, specifically when diagnosing hard drives. To run a SMART test, select **Autotest.**

Notifications

You can monitor device activities, such as when a user was added and when the drive synchronized.

1. Open the **Device Manager.**
2. Click **Show advanced settings,** and then click **Notifications.**

   You can filter notifications based on warning, errors, or show all notifications. You can also download the system log.

Storage

You can check how much storage is available on your Personal Cloud 2-Bay and format your drive.

1. Open the **Device Manager.**
2. Click **Show advanced settings,** and then click **Storage.**
   - **Overview.** Review the total device storage and the status of internal and external volumes (USB attached devices).
   - **Network Drives.** Format (erase all data) but keep the volume or Delete (remove the volume). The Personal Cloud 2-Bay has one volume on each disk.

   **Important info:** Formatting your drive erases all data. Before formatting the drive, back up your data to another drive.
To learn how to reformat your drive, review the support article.

Network Settings

Usually, you do not need to change your Personal Cloud 2-Bay network settings. If you are having issues with network connectivity, changing the settings might solve the problem.

Note: Changing network settings requires some understanding of networking and your specific setup.

Change the IP configuration

By default, the IP configuration uses DHCP, a standard networking protocol that dynamically selects IP addresses for interfaces and services. If you are having issues with network connectivity, you might want to use a fixed IP address.

1. Open the Device Manager.
2. Click Show advanced settings, and then click Network.
3. On the Connections tab, click Edit.
4. Click either the IPv4 or IPv6 tab.
5. (IPv4). Select Manual or Automatic (DHCP) from the pull-down menu, and then click Save.
6. (IPv6). Select an option from the pull-down menu, and then click Save.

Configure a proxy server

A proxy server acts as an intermediary between computers and the Internet. It allows the computers on your network to make indirect network connections to other network services. Using a proxy server:

- Speeds up Internet surfing
- Hides the IP address of a computer so that you can surf anonymously
- Bypasses security restrictions and filters to access blocked websites easily

Note: Your router must have a proxy server to complete these steps.

1. Open the Device Manager.
2. Click Show advanced settings, and then click Network.
3. On the Proxy tab, select Proxy server in the drop-down menu.
4. Enter the proxy server address and the name and password if authentication is required.
5. Click Apply.

Note: Not all devices support IPv6. Go to test-ipv6.com to determine if IPv6 is supported.

Note: Not all devices support IPv6. Go to test-ipv6.com to determine if IPv6 is supported.

Note: Your router must have a proxy server to complete these steps.
Configure port forwarding

Port forwarding makes your Personal Cloud 2-Bay on your network accessible to other network attached storage devices on the Internet, even though your Personal Cloud 2-Bay is behind a router. Automatic port forwarding is enabled by default, and the port numbers are the same for your Personal Cloud 2-Bay and router ports.

If you need to change the router port number for services, confirm that the ports are available on your router. Additionally, you must confirm that your router is compatible with UPnP-IGD/NAT-PMP protocols. See your router’s user manual for details.

1. Open the Device Manager.
2. Click Show advanced settings, and then click Network.
3. On the Port Forwarding tab, move the cursor over the service until the Edit button appears on the right.
4. Click Edit, and then click Enable.
Hard Drive Maintenance

If a drive on your Seagate Personal Cloud 2-Bay fails, and you have configured your device for maximum protection, you can replace it; your content is safe on the other drive.

Important info: Refer to the warranty before performing hardware repairs or maintenance not described in this manual.

- Precautions
- Remove a hard drive
- Install a hard drive
- Create a new volume

Precautions

- Except for replacing a hard drive, performing maintenance within the enclosure is not supported and can void your product's warranty.
- During operation, the drives should remain in place for optimal airflow.
- Observe all conventional ESD precautions when handling the Personal Cloud 2-Bay's parts. Avoid contact with backplane components and module connectors, etc.
- Replace an existing or faulty hard drive with a hard drive of equal capacity.
- When handling hard drives, make sure that they are placed (and stored) on a cushioned surface.

Remove a hard drive

Disconnect power from the device before removing a hard drive.
1. Push the button on the back of your Personal Cloud 2-Bay.
2. Remove the cover from the enclosure.

3. Remove the two screws that hold the disk in place.
Install a hard drive

Disconnect power from the device before installing a hard drive.

1. Attach the screws provided with your Personal Cloud 2-Bay to one side of the drive.

4. Pull the disk forward to disconnect it from its plug and then lift the disk up to remove it from the enclosure.
2. Guide the hard drive so that the rear screw fits into its slot, and then slide the drive into its plug.

3. Fix the screws to the outside holes.
4. Replace the cover, snapping it into place.

Create a new volume

Your Personal Cloud 2-Bay has one volume per drive. After you have removed and replace the drive, you'll need to create a new volume.

For more information on how to create a new volume, review the support article: Create a new volume.
Appendix A: Compliance and Safety

Regulatory Compliance

FCC DECLARATION OF CONFORMANCE

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

FCC Class B Information

FCC Class B Information

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

• Reorient or relocate the receiving antenna.
• Increase the separation between the equipment and receiver.
• Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
• Consult the dealer or an experienced radio/TV technician for help.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

FCC Caution: Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

IMPORTANT NOTE: FCC Radiation Exposure Statement

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator & your body.
This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

The availability of some specific channels and/or operational frequency bands are country dependent and are firmware programmed at the factory to match the intended destination. The firmware setting is not accessible by the end user.

Note to US model owner: To comply with US FCC regulation, the country selection function has been completely removed from all US models. The above function is for non-US models only.

Industry Canada

This device complies with RSS-210 of the Industry Canada Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Ce dispositif est conforme à la norme CNR-210 d’Industrie Canada applicable aux appareils radio exempts de licence. Son fonctionnement est sujet aux deux conditions suivantes: (1) le dispositif ne doit pas produire de brouillage préjudiciable, et (2) ce dispositif doit accepter tout brouillage reçu, y compris un brouillage susceptible de provoquer un fonctionnement indésirable.

IMPORTANT NOTE: (For mobile device use)

Radiation Exposure Statement:

This equipment complies with IC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator & your body.

NOTE IMPORTANTE: (Pour l'utilisation de dispositifs mobiles)

Déclaration d'exposition aux radiations:

Cet équipement est conforme aux limites d'exposition aux rayonnements IC établies pour un environnement non contrôlé. Cet équipement doit être installé et utilisé avec un minimum de 20 cm de distance entre la source de rayonnement et votre corps.

Europe - EU Declaration of Conformity

This device complies with the essential requirements of the EMC Directive 2004/108/EC. The following test methods have been applied in order to prove presumption of conformity with the essential requirements of the EMC Directive 2004/108/EC:

</table>

**Safety Guidelines**

ℹ **Important info:** Refer to Warranty before performing any hardware repairs or maintenance that is not described in this manual.

**Power Source**

⚠ **Caution:** Use the product with the provided power supply only.

✏ **Note:** To protect your data, always follow the safe removal procedures for your operating system when disconnecting your product.
Safety Handling

To comply with applicable safety, emission, and thermal requirements, install all drives and empty drive trays according to the instructions in Hard Drive Maintenance.

Permanently unplug the unit if you think that it has become damaged in any way.

You must shut down and disconnect power from the Personal Cloud 2-Bay before maintenance or physical troubleshooting is performed on the device.
Shut down and unplug the unit before moving it.

Safety

Power Supply

The Personal Cloud 2-Bay must only be operated from a power supply input voltage range of 100 - 240 VAC, 50 to 60 Hz.

The drive’s power supply is not serviceable or replaceable. If Seagate technical support has determined that the power supply is faulty or has failed and the unit is under warranty, return the Personal Cloud 2-Bay to Seagate per the instructions provided by the Seagate technician.

Environment

Make sure that the electrical connection to the power cord is grounded.

Provide a suitable power source with electrical overload protection to meet the requirements of the technical specification.

Never expose your device to rain, use it near water, or use it in damp or wet conditions. Never place objects containing liquids on the enclosure, because liquid could spill into its openings. Doing so increases the risk of electrical shock, short-circuiting, fire, or personal injury.

Always unplug the device from the electrical outlet if there is a risk of lightning or if it will be unused for an extended period of time.

Do not use the Personal Cloud 2-Bay as a shelf to support any other object.

Personal Cloud 2-Bay Placement

Place your Personal Cloud 2-Bay on a surface that is capable of supporting its weight, including the hard
drives and accessories attached to the Personal Cloud 2-Bay ports. Make sure the Personal Cloud 2-Bay is placed securely and cannot tip or be pushed over. Do not stack items on it. Doing so can prevent proper airflow and affect operation.

The maximum ambient temperature during operation is 40°C or 104°F.

The power connection must have a safe electrical distribution system and provide overcurrent protection.

The power supply unit has a ground leakage current of 3.5mA. The design of the electrical distribution system must take into consideration the total ground leakage current from all the power supplies in all the units.

**Data Security**

Any loss, corruption, or destruction of data while using a Seagate hard drive or a hard drive system is the sole responsibility of the user. Under no circumstances will Seagate be held liable for the recovery or restoration of this data. To help prevent the loss of your data, Seagate highly recommends that you keep TWO copies of your data: one copy on your Personal Cloud 2-Bay, and a second copy on one of the following:

- Direct-attached storage (DAS)
- Another NAS device
- Cloud storage
- Some form of removable storage or archival media

---

**Important:** 1GB = 1,000,000,000 bytes. 1TB = 1,000,000,000,000 bytes. After the drive is formatted, the available storage capacity varies depending on your operating environment (typically 10%-15% less).
