Seagate Storage Systems and PHP-Related CVEs Technical Bulletin

Part Number 212220900-00, A • October 2026

Introduction

This technical bulletin provides brief information related to PHP-related CVEs and if they apply to the Seagate Storage Systems.

Description

Seagate continuously monitors and evaluates publicly disclosed cybersecurity vulnerabilities to determine their applicability to supported products.

Many security advisories and CVEs are associated with specific software components or runtimes. A vulnerability is only applicable if the affected component is present within the product. As part of Seagate's security assessment process, newly disclosed vulnerabilities are reviewed to determine whether the affected technology is utilized within Seagate storage systems.

PHP-related vulnerabilities, including but not limited to CVE-2026-109618 and CVE-2026-109619, affect environments that utilize the PHP runtime. Seagate storage systems do not use PHP within their product management interfaces. As a result, vulnerabilities that specifically target the PHP runtime are not applicable to Seagate Storage Systems.

The absence of the affected software component means that PHP-specific vulnerabilities do not present an exposure to Seagate storage systems and do not require mitigation, workarounds, or corrective action on supported Seagate storage platforms.

Seagate remains committed to product security and routinely reviews publicly disclosed vulnerabilities to identify any potential impact on customers. When a vulnerability is determined to be applicable to a Seagate product, appropriate remediation guidance and updates are provided through established security and support channels.

Conclusion

PHP-related vulnerabilities, including CVE-2026-109618 and CVE-2026-109619, are not applicable to Seagate storage systems because the affected PHP runtime is not used within Seagate product management interfaces. Consequently, these vulnerabilities do not represent a security exposure to Seagate storage systems, and no customer action is required.
