What You Need To Know

Seagate Business Continuity Requirements of Suppliers

What is Business Continuity and Business Continuity Planning (BCP)?

Your Seagate Supply Chain Risk Contacts

Seagate Business Continuity Requirements of Supplier

Our supply chain risk management program utilizes a structured framework to effectively evaluate and segment our suppliers, which enables us to prioritize and manage suppliers based on their overall exposure to risk and supply chain disruption. This segmentation is the foundation used to determine which suppliers are assessed for further follow up and the proper level of Seagate supply chain risk management. All suppliers are required to provide evidence of their business continuity plans and that the key elements of their plans, including risk analysis and business impact, are current, actionable, and provided to Seagate annually or upon request.

Requirements of Supplier:

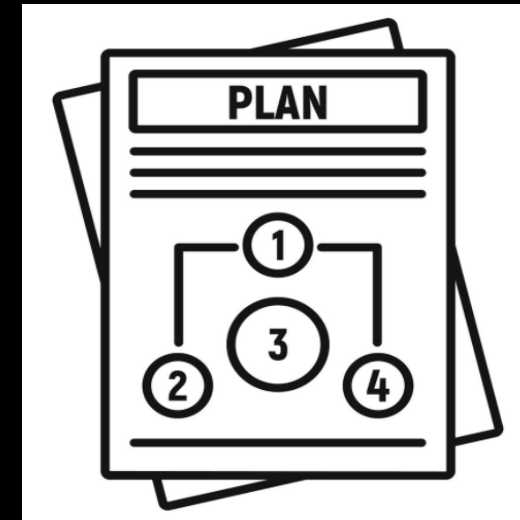

- Immediate communication to Seagate with defined action plans in the event of a supply disruption
- Actively support Seagate's Supply Chain Risk Program by responding to requests for information or mitigation plans promptly
- Align with ISO 22301 Business Continuity standard internally and with your suppliers, including the development and testing of business continuity plans
- Discuss and monitor Business Continuity and Supply Chain Risk practices regularly with your own suppliers

What is Business Continuity?

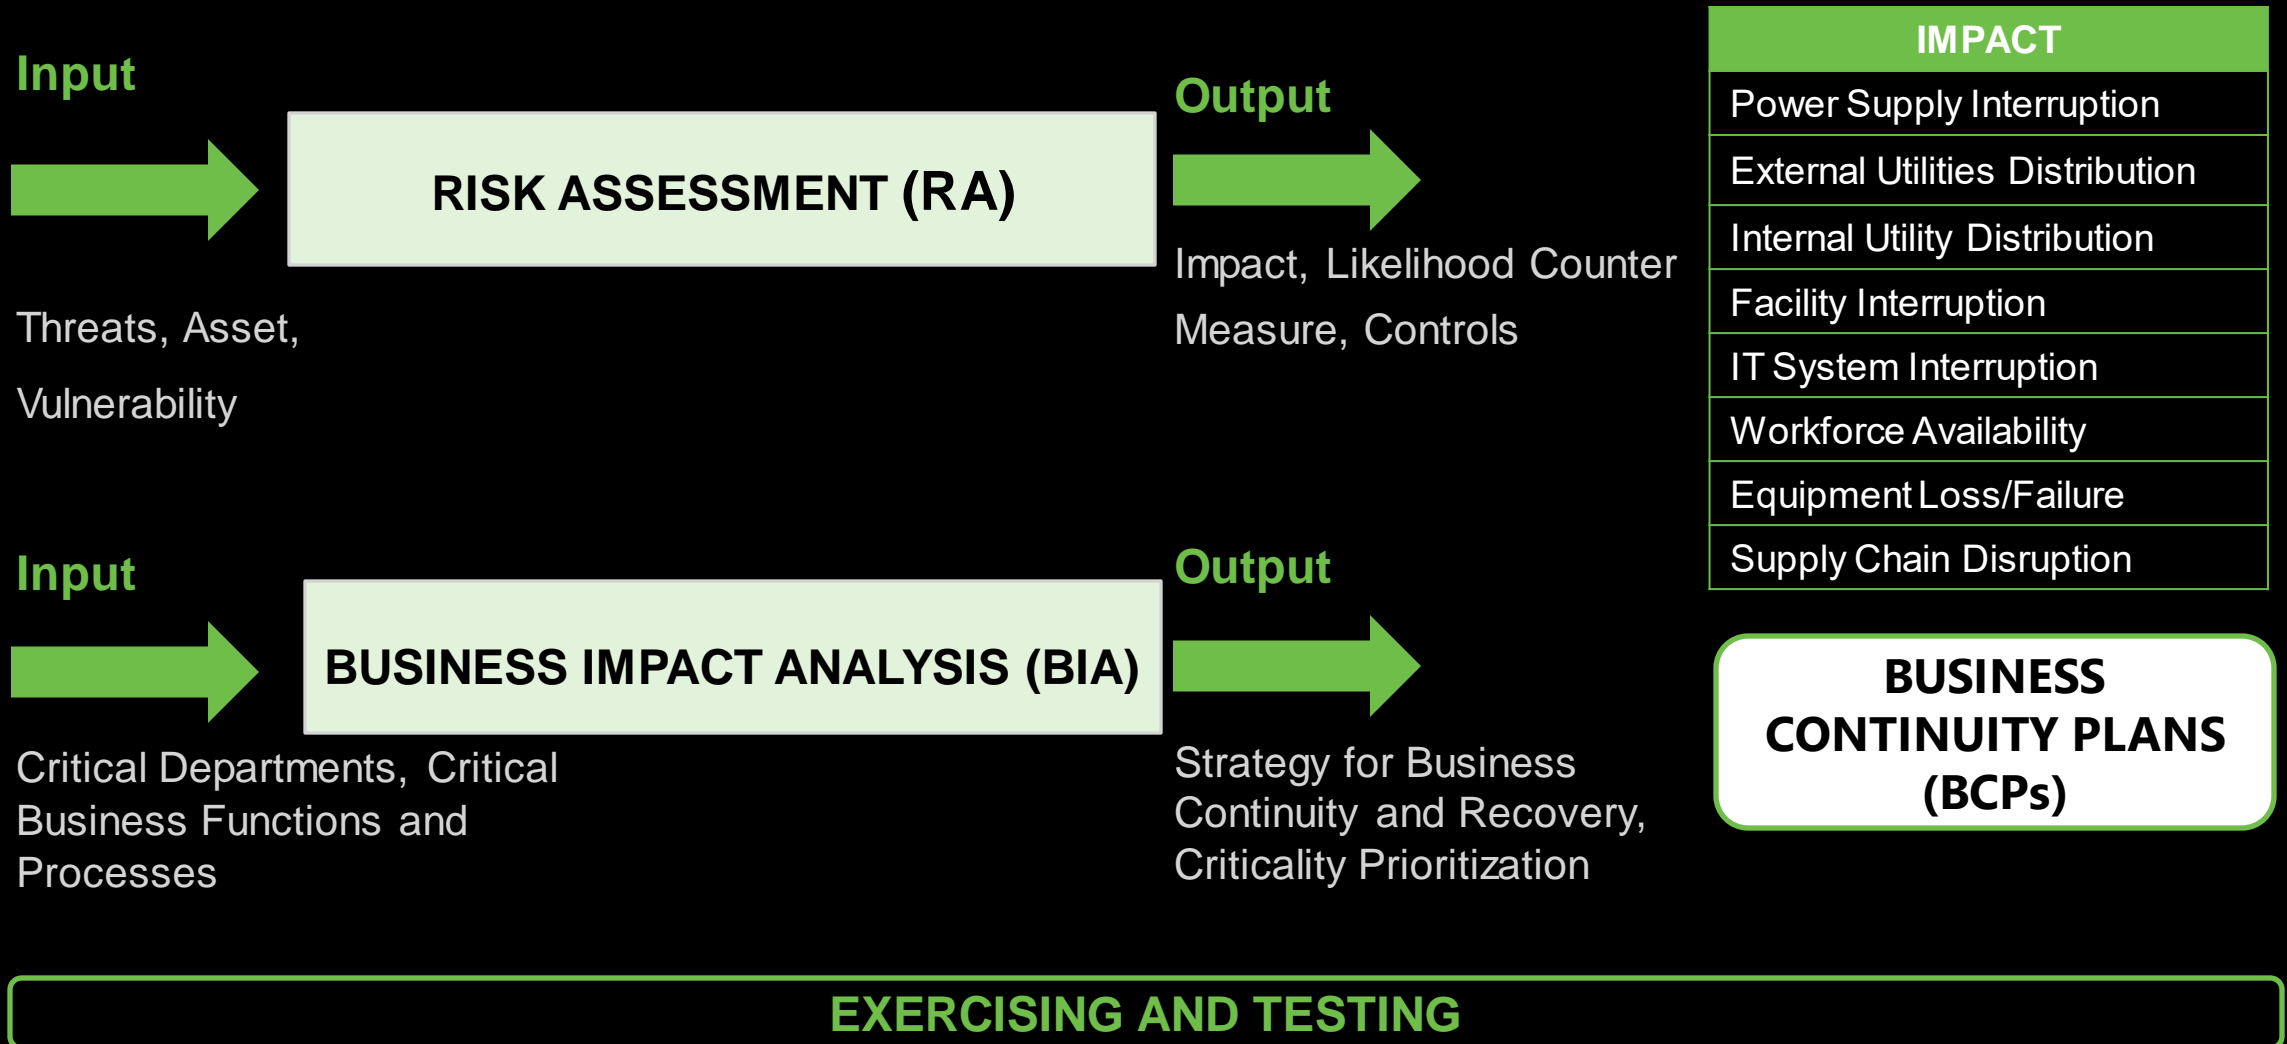

Business continuity ensures every organization, location, department, and function are able:

- To deal with challenges and threats; and
- Potential business impacts of business disruptions

Helps to reestablish business operations as quickly as possible

What is Business Continuity Planning?
