

### Daytona™

#### Configuration Guide

#### CMOS Values

Capacity	170MB	256MB	341MB	514MB
Cylinders	538	723	1011	997
Heads	10	11	15	16
Sectors	62	63	44	63
Write Precomp	65535	65535	65535	65535
Landing Zone	538	723	1011	997

#### *Note on Write Pre-compensation:*

The Quantum Daytona series drive does not require write pre-compensation, your CMOS setting should be set to reflect that this feature is not enabled. If the setting of 'none' is not present, the value 65535 is a number that the BIOS will accept to disable this feature.

## **Jumper Settings**

Single Drive	DS only
Master Drive	DS only
Slave Drive	No jumpers
