Deploy a hybrid or hosted VSaaS platform with Lyve solutions from Seagate.

Today’s surveillance solution providers realize the benefits of hybrid video surveillance as a service (VSaaS)—where on-premises networks leverage the cloud for backup and scalable, long-term retention—and customers can decrease operational burdens associated with maintaining physical storage as well as bypass maintenance and upgrades costs. Providers also increasingly turning to hosted VSaaS where on-premises video cameras store data directly to the cloud through an S3 interface.

Whether hybrid or hosted VSaaS, robust storage systems must support simple storage and guaranteed retrieval of critical video data while enabling analytics in order to drive business value. Lyve™ Cloud solutions from Seagate® are scalable, modular, and vendor agnostic—providing a complete storage solution for hybrid and hosted VSaaS surveillance—and working seamlessly with video management systems (VMS) to enable real-time backup and long-term data retention.

**Benefits**
- **Lowest cost/TB** improving total cost of ownership (TCO).
- **Options** to extend video storage without expanding your hardware footprint.
- **Secure** with data protection & scalability.
- **No additional charges** for API calls or egress fees

**Best-Fit Environment:**
- Hybrid video storage
- Hosted video management
Use Case: Hybrid Video Storage - On-Premesis Solution + Extending Video Storage to Lyve Cloud

Value Propositions of Hybrid: On-Prem + Cloud Storage

- Lowest cost/TB
- Option to extend video storage (without expanding Hardware footprint)
- Data protection & scalability
- No additional API charges and egress fees
