THUNDERBOLT™
Backup Plus FOR MAC

DESKTOP DRIVE

Data Sheet

Everything needed to transfer, store and back up files using Thunderbolt technology

Thunderbolt technology is a revolutionary interface supporting high-resolution display and high-performance data devices through a single port. At up to 10Gbps, transferring high-definition films and other large files now takes seconds rather than minutes in comparison with older interface technologies.

Everything needed to use the Seagate® Backup Plus for Mac® Desktop drive with Thunderbolt-enabled devices is included in the box, even the cable. The included Backup Plus for Mac desktop drive can now take full advantage of the blazing-fast Thunderbolt connection on your computer. With dual Thunderbolt ports, it can support daisy-chaining up to six compatible Thunderbolt devices, minimising clutter on your desktop.

With the *Save* feature within the included Seagate Dashboard, user-generated content can be backed up from your favourite social networks. Many people now use their smartphones to capture priceless moments. While these devices are handy and readily available, storage is not their strong suit. Capture a memory, post it on a social networking site and let the Seagate Dashboard automatically back up any content posted. Even if the file gets accidentally deleted from the device, another copy can be waiting.

The *Share* feature within the Seagate Dashboard allows multiple files to be uploaded to social networks at once from your computer. The days of uploading individual files without creating a new album are gone! Simply select files to upload, choose where to post them and even add comments. Managing your social profile has never been easier.

Connect multiple devices to turn your computer into a powerful workstation with just one interface.
